

Gen AI Cohort 2025 By Developers | For Developers

- Project Based Learning
- 5 Major Projects and 10 Mini Projects
- Live Sessions spanning 12 weeks
- Cohort delivered By Developers – For Developers
- Mentors: Working IT Professionals with over a decade of industry expertise

Master the Fundamentals

Introduction to Generative AI

- What is Generative AI, how does it operate, its use cases, and its limitations?
- Deep Dive into Basics - LLMs, Transformers, Diffusion Models

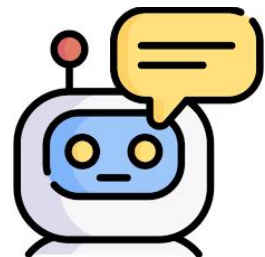

Low Code No Code AI Tools

- Introduction of Low Code No Code Tools.
- Industry standards Low Code No Code Platforms
- Real-time projects to work on and implement the learnings

Prompt Engineering

- Introduction of Prompt Engineering.
- Prompting Techniques :Zero Shot, Few Shot and Chain of Thoughts
- Best Prompting Practices in the industry
- **Hands on Project : MealMate**

Introduction to Retrieval Augmented Generation (RAG)

- Introduction of RAG.
- Core Components of RAG
- Understanding the core components with Hands on approach
- Mastering Advanced RAG: Optimization and Contextual Retrieval
- **Hands on Project : AskMyDocs**

Skills You'll Master

RAG in LangChain

- Introduction to LangChain
- Understanding how RAG works in LangChain
- **Hands on Project : NewsMind**

Agentic AI in LangGraph

- Introduction to LangGraph
- Core Components in LangGraph
- Workflows in LangGraph
- Agents in LangGraph
- Memory and Checkpointers
- **Hands on Project : CineGraph**

Model Context Protocol (MCP)

- Introduction to MCP and its core idea
- Core Components of MCP
- **Hands on Project : ServerSend**

Future of Generative AI

- Your Roadmap to Future with Generative AI
- Human + AI Collaboration – The Future Workstyle
- AI + Creativity: The Future of Art, Music, and Storytelling

Signature Projects

Project 1: MealMate

A fun prompt-driven food bot that serves preset burgers, sides, and drinks, totals your bill, and delivers instant food joy.

Project 2: AskMyDocs

An intelligent RAG-powered chatbot that understands your documents, retrieves precise answers, and transforms complex content into clear, actionable insights.

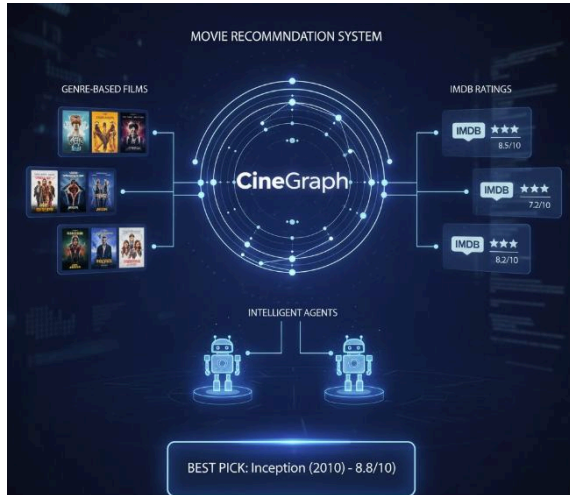

Project 3: NewsMind

A LangChain-based RAG project that retrieves, compares, and summarizes news from multiple sources, giving context-rich insights and balanced perspectives.

Explore Our Portfolio

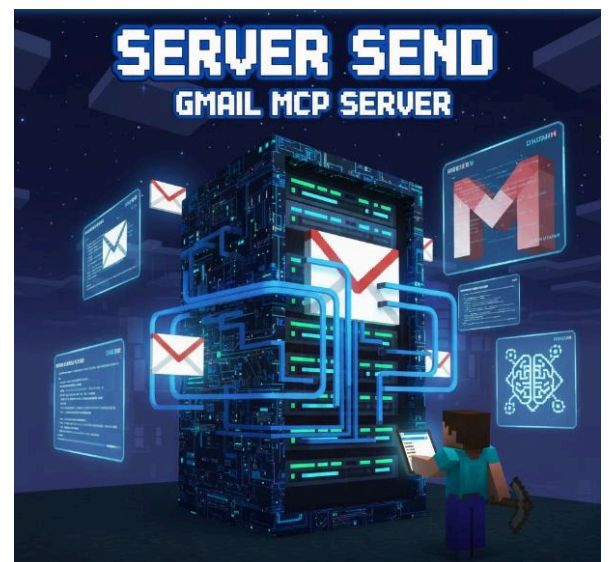

Project 4: CineGraph

A LangGraph-powered movie recommendation system that uses intelligent agents to fetch genre-based films, compare IMDB ratings, and suggest the best picks.

Project 5: ServerSend

An intelligent platform leveraging MCP to process Gmail, providing AI-powered contextual insights and automated email management.

And Supporting Exercises & Demos....

Your Learning Experience

Hands-on Training: Gain practical experience with industry-leading tools and techniques.

Expert Guidance: Learn from seasoned professionals with years of experience in the field of AI.

Collaborative Environment: Engage with like-minded individuals and foster creative collaboration.

Real-World Applications: Discover how Generative AI is revolutionizing various industries, from art and design to healthcare and beyond.

Who Should join

- Professionals seeking to enhance their skills and stay ahead in their careers.
- Students are eager to explore the intersection of technology and creativity.
- Anyone with a passion for innovation and a desire to make an impact with AI.

Instructors

- Our cohort will be led by experienced working AI professionals with expertise in Generative AI and deep learning

Certification

- Upon successful completion of the cohort, participants will receive a certificate of completion

Prerequisites

- Basic knowledge of Python programming language
- Familiarity with machine learning concepts is helpful but not required

Tools & Technologies

Programming Language

- **Python** – Core language for AI development and scripting.

Low-Code / Automation Tools

- **Zapier, Make** – Automate workflows and integrate multiple apps without heavy coding.

UI / App Frameworks

- **Streamlit, Gradio** – Build interactive AI apps and dashboards quickly.

Embedding Generation Models

- **OpenAI Embeddings, Hugging Face Models** – Convert text into vector representations for semantic search and RAG.

Large Language Models (LLMs)

- **OpenAI, Gemini, Claude, Grok** – State-of-the-art LLMs for text generation, summarization, and AI reasoning.

Vector Databases

- **Pinecone, Chroma** – Store and search embeddings efficiently for semantic retrieval.

AI Orchestration / Agent Frameworks

- **LangChain, LangGraph, Model Context Protocol (MCP)** – Build RAG pipelines, AI agents, and multi-step reasoning workflows.

Cloud-Based Coding & Notebook Environments

- **Jupyter Notebook, Google Colab** – Interactive coding and experimentation environments for AI projects.

Web APIs / Integration Frameworks

- **FastAPI** – Build high-performance APIs for AI applications.

Tools & Technologies

[Register Now](#)

Minimum Eligibility: Basic Python Programming Proficiency
